Hi to all!

I have a model of a building (physical), made professionally but not 3D printed. I need to digitize it in 3D form and then print it. Precision of the model is one of the most important things. Can anybody do it?

If there is such an advanced 3D-modellers, please answer me in private messaging about probable price, terms and conditions and approximate time of the digitizing.

Thanks to all in advance!

Can you post an image of the building here so that we can get a rough idea of the complexity?

====
One option you have is to take several pictures of the object and use 123dCatch to convert them to 3d. I've had mixed luck with it, but others seem to be doing well..

I would think you could find a local company that could do a 3d scan of your model into a file

format you need.

There are a few companies in the city I live that are able to do this.

But perhaps you need to be living in a somewhat larger city to find such a service; otherwise you could find a company online with the downside being the cost of shipping.
