I'm having a few problems with the inventory page in chrome:

1) For some reason, the materials window is displaying the retail price with the markup added twice. The proper price is still displayed for customers.

2) When I exit the materials window, I have to refresh the inventory page to be able to scroll.
3) Can I edit the markups from the edit model page? This would be much better than having to put the model from sale without a markup, then having to wait for it to show up on my inventory page before adding a mark up.

Cheers,
Steve

1 & 2, the same for me using IE8 on XP

3. You can add your markup in the material selector on the right of the model edit page.
Save the changes with button below the material selector to make the changes stick.

Funny, ever since they changed the layout, I hadn't noticed that you could click on that. Oops.
Thanks for pointing that out!

Same for me wrt exit and scroll.

My page shows in Euros, but is also not right. The markup is added twice as in your cases, and then 21% VAT is added (is this the correct rate?).

And if the button 'Show VAT' is clicked it shows a figure identical to the retail price in brackets. Not sure why.
