----------CLOSED----------

Hello, I have reached an agreement with a modeler. Thanks for all of the replies!

----------CLOSED---------- ----------

This is a specialty plastic fitting that we would like to make. I realize that we could machine this part, but I want to run a couple of trials in 3D printing for my business to see if this is cost effective in the long run. My first step is to get a model made.

Is any experienced 3D modeler interested in making this format that Shapeways can print out for me?

Please see the attached pictures for the concept. I can ship the part to you once we reach an agreement.

Thanks much!

Mason Fuller, CEO

Still need help? You can contact me if you need it to be modeled.

Regards,
Bob

Hi Sjoerd,

I have already sent my model out for design. I reached an agreement this morning and have not yet closed the topic on the forum. Thanks for responding. I will keep your comment on file and let you know if we have another job that comes up.
