I had a work presentation at the Athens School of Fine Arts recently.
Two of the works, T-Gyroid and Shell, are both produced by Shapeways.
More information here.
Check a video on YouTube and some images on Flickr.

Wow, Using Shapeways for an actual art exhibition !

I saw the shell when it came out of production. I really like it. It is very beautiful and graceful design.

Kindly,
Marleen

Thank you Marleen

This presentation included previews works as well. I am planning to make my next one only with 3D prints. Of course, I will post here again when done, hopefully during 2010...

Thanx again!

hello.
how is the wall thicknes of the shell or th gyroid?
i want to make larger objects (30 cm), but the price . i am privat not commercial. did you tested the minimal wall thickness?

greet

oliver

Hello Oliver

The wall thickness of the shell is about 1mm. Same as the T-Gyroid model.

I know exactly what you say, as I face the same problem each time I upload a model.
I am trying to use 1mm wall thickness, also I try to make my models' surfaces look like a "grid" or any similar grid surface, just to keep the price down.

However, whatever I tried on a 30cm model... gets immediately expensive...

thanks for the fast answer.
ok, then i will make my bigger models with my old convential method .
everything under 20 cm i will print here.
here are my olders models.

bye

Oli

Great work Oli

How much did you pay for the red piece to get it printed? Where?

this is self made.
i would pay a lot for print in this size and wall thicknes.
