Hi all,

I've just received my order, and just want to show, one more time, with some pictures of the pieces received how is important to be able to determinate print orientation.

In the picture you can see an armband and a ring, from my BLACK WIDOW Collection, as you can see side one side in both pieces has a very bad quality. I have other 5 BLACK WIDOW armbands at home printed with the correct orientation (the uploaded file position) and they are just perfects.

I've already sent an e-mail to the CS, I know what they can do.

This post is just to remember how the possibility to choose the correct orientation is very helpful for the final quality.

Hoping to hear also your opinion,

Cheers,

Dario
