I personally think that it would be nice to be able to chose to scale an object when you order it, such as like you want it 200% bigger, or only 50% of original.
I know for some people that want the same part, they have to upload as a completely new part.
I dont know about everyone else, but that can get slightly annoying to me trying to get it to work all the time.

Another cool option would be "Print it at whatever size would cost $25" or any arbitrary price within limits of the machine.

I know with the Dimension BST printer you can set the inside fill of an object to be sparse, where it makes a loose criss-crossed support structure, or full.. so instead of having to manually hollow your object or put in supports, I wonder if it is feasible to have an option similar to that of the BST?

Hi guys,

thanks for the feedback. We will consider it.
Keep an eye on the site, we may have something you like sooner than later!

regards,
Peter
