High shop owners,

for my shop the most demanding need would be to have for my items some post production coloring available (material detailed, polished WSF or FD).

Any other shop owner dealing with this question?

My practical constraints are:

- available color set (black, grey, silver, tan, olive)
 - surface (glossy)
 - coloring mechanism (most preferred sprayed)
 - shipping (Shapeways ships to me as a shop owner, or to somebody who buys that. But how to deal with a post production office or a reseller)
- (would like to have that in shapeways hand, but I also understand the constraints onm their side)

Anybody facing similar problems or has some solutions or practicable ways of woring in place?
