Just got this back.....it was printed in the white, stong and flexible material. This was just an experiment for us just to see how it would turn out.

Is it possible to request finer resolutions when you have something printed?

53mm tall 48mm wide. Cheers, Danny

Why did you pixelate the image so much ? I think it will look better with a higher resolution.

For best results, you may need another provider who is not so picky about the 0.7001 mm.

The model was/is not pixelated on my end.....it is the resolution of the printer at shapeways. I wonder if they could change the oreintation of the print....instead of laying it down flat maybe they could stand it upright.....

I have carved several of these using my cnc machine and here is an example.....
