I'm Scott.

I own Dominion Milling Center. We run 3D Systems printers and many German CNC machines for fun and profit!

Hope to spend some time on this site and learn and share ideas and crap like that.

Nitro-Methane Friction-Grip handpiece I made....

The "Rebel-Mill"

Five axis German wet-mill.

I have nice White-Light 3D scanners from SteinBichler Optiks in Germany. 7uM accuracy.

We design teeth for Dental Industry.

This is Titanium..
Scott

hmmm.

72 views and not one response huh.

OK.

Kinda a quite, shy forum I guess??

Hey DMC,

I don't think we're that shy, I just think you may have come on a little strong.

Typically folks will post and say hello, say where they're from and what they're interested in, and strike up a few conversations based on people's responses. A little back and forth is what you might be missing.

Welcome! When did you first get into CNC milling?

Nice kit....

Would it be wrong to ask for a titanium tooth replacement with a skull face?

Shy ? Not really...
But envious.

Sooo many nice "toys".
I just have an old lathe and a box column drill in a cold cellar.
