
Subject: Pricing after model upload going all over the place...

I have no idea what is going on here but I'll just give a quick run-down.

I uploaded the model, I set the material pricing and it just keeps giving me different numbers everytime I go to my shop. Also, when I select which materials I want this model available in, it resets them everytime I go back and visit the part in the shop. I just gave up and set it to be available in just the default material and it still showed the wrong price.

What gives? Is the site just slow to update? Is shapeways re-configuring the cost to make as I'm setting it?

Things always seem to straighten out after a while, it did this with my first part too but it just seems as if certain functions here seem to run real slow and glitchy. Or is it just me?

Update from 2 minutes ago... I just logged out and went to my shop and the product is showing the correct price but it is still showing other materials. I would like to have all of the "strong and flexible" materials available to this product but some of the others I don't need.

I don't intend to be a pain, still happy that this place exists but I'm just trying to find a rhythm here when it comes to shop usage.
