The max allowed filesize for attachments to forum posts is 64MB - for some reason the max filesize I can send via PM is 977KB.

More and more recently, I find myself helping other people with their model files - for those model files that are 'broken' the only options for the client to send the file over are direct via email (if their email provider allows 'larger files') or by using a 3rd party service such as dropbox.

Please can the PM filesize allowance be upgraded so that decent sized files can be sent via PM.

Cheers,
Paul

p.s. Thanks for upgrading the amount of PMs that can be stored
