I'm an artist in the jewelry business looking to expand my materials into something completely custom and original. I have what I want drawn out on paper and need a good modeler to finish what I started so I can get it made. The items I want are steampunk-like bead rings. There will be two different bead rings that stack like building blocks on one another. They both need to enclose an 8mm bead with a tad extra room as beads never are exactly 8mm in size. Both bead rings will need two holes so that 22-16 gauge wire can be strung through them and the bead. If anyone is up to the challenge, I'll send you my designs and we'll hopefully work something out.

Thanks,
Colton

hi colton

maybe i can help you?
which program do you need to make your 3d model?
if it's for mass-production, i can make it with SolidWorks
I'm an experienced solidworks' user, here is my rendering . .

here is my email : fills_sanctify@yahoo.com

Regards

Albertus Putra
