These 5 large 3D printed sculptures are now installed in the Department of Mathematics and Statistics at the University of Melbourne in Australia!

The first 3 are unusual versions of surfaces: a Möbius strip, a Klein bottle and a Torus. The other two are based on two 4-dimensional polytopes, analogous to the 3-dimensional dodecahedron and icosahedron.

They were printed by Shapeways, and spray dyed by me!

These are awesome! Can you share links to the models?

Thanks Carine! Here are the links:

Round Möbius Strip: <http://shpws.me/3WTeX>

Round Klein Bottle: <http://shpws.me/3YKV>

Clifford Torus: <http://shpws.me/5m78>

Half of a 120-Cell: <http://shpws.me/4elh>

Half of a 600-Cell: <http://shpws.me/3Y5h>

There are also smaller (less expensive!) versions of all of the models:

That's amazing!

I used to walk those halls - Melbourne Uni is my old college!
