---

Hi all,,

i making a model, and just to test before i continue working on it, i checked if it was upload able.

both Accutrans (watertight) and Meshlab (remove manifold thing) said that it was watertight and that there is nothing to remove (no manifolds error)

but still i get a manifold error on shapeways,

could some1 do a quick check?

edit:

i think i found the problem, the object was just to small (scaled it to much)
