my name is Christopher, I have had much training in 3D modeling using Autodesk's Maya and Pixologic's ZBrush [which is used for high-detail modeling.]

I'm in my last year of School [my major is Computer Animation]

My goal is to find a partner who is good at creating concepts for 3D sculpting/ modeling [they don't necessarily need to be high-detail concepts, just good enough for me to understand] , It can be organic or inorganic, fractal, geometric, etc.

I'm open to all styles.

I post this in the hopes that, I might find someone who has ideas/ concepts/ sketches, that they would like to see brought to the 3rd Dimension, so that I can continue to practice 3D modeling whilst also maybe sharing whatever profits when can get from selling the printed models themselves.

I look forward to any and all your replies.

thanks

I am looking for someone in or close to GA.

I do drawings on graph paper and one of my designs can be found on deviantart by artbylink. the image is called graph design.

Hi Alice,

well, I happen to live in Florida, so I suppose we would mostly have to work via Phone, Skype, and email. We could use DropBox to transfer files/pictures if needed as well.

I took a look at the picture you referred to and I like the design, it's very intricate, and I'm a big fan of stuff like that. It's also very simple in terms of making it in 3D so it's definitely do-able.

I know I'm not in Ga but if you would still like to work with me, feel free to reply back.

I am in need of a modeler for a prototype.. you would need to sign a non disclosure agreement... the design is pretty straight forward.. would you be open to that? lmk..thx
