Hello, there.

I need a product accessory made that clips either onto a person's belt or waistband of their pants. The accessory needs to have a kind of D-ring that simulates a belt loop. The idea is to be able to clip a carabiner off of it instead of the belt loop from someone's waistband as a more durable alternative attachment point.

I would like to see your ideas and see if a spring-hinge would be good for the accessory, too.

I've attached a crude picture of my desired accessory below. Please contact me PM me if you're interested and I will send you my email.

Thank you!

I believe I've found the modeler I'm going to go with for this job.

Thank you for your reply.
