Hi guys. I recently uploaded my Dredd badge, not to big 8cm by 10cm and I was shocked to get this price back.  
Dredd Badge

Any idea why the metal version  
is over £200 ?

I really want to sell these for under £25. Would hollowing them reduce the price?

Paul

Over 100+ views

Anyone?

I'm close to cancelling the model. It's bad enough you don't support £'s UKP which is playing hell with my taxes but now I don't get any markup on a simple model. I missed the convention season due due to no reply from here

Off to find another 3D Printers that actually care about their customers

All prints except ceramics are based off volume. Steel is not only an expensive material but also an expensive process. More than likely you'll find our competitors to be at least as expensive. You could always print in wsf or sandstone (our cheaper materials) and then paint or plate it with metal.

You might also want to make it thinner for other reasons - unless I am completely mistaken, your badge in steel would weigh in at about 270 grams. Pretty heavy for a badge, unless your fellow riflemen like to spend their whole day crouched.
