Just when you think you have mastered this upload lark. Wham, two files are driving me potty.

The first has inverted normals.

The second the dreaded manifold.

My software seems to say I have fixed them, but.....

Well I can't very well sit here and let you go bald now can I?

Class313DMS

Didn't see anything glaringly wrong with this one, I just re-oriented the normals, and it uploaded fine.

Class313PTS

Found an extra Face on one of the windows so removed it. Uploads fine now.

Try these and let me know...

WiKKiD

What can I say. I must be having a bad hair day, or my software cannot fix far enough.....

Thanks, those files have now uploaded, so I can check out the next stage of my project.

Groovy!

Please suffix your original post with <FIXED> so others won't be obliged to download and fix.
