Hello everyone

I am an experienced 3D CAD modeler, with experience in:

- product design/redesign
- design analysis
- photorealistic renders

My choice of software is Solidworks/Catia. Some other might be used after the initial design if polycount needs to be reduced.

I work fast and relatively cheap. Send me private message here or contact me on ronsaki1@hotmail.com in ordet to set a deal.

I am new to this forum, however I have had experienced with designing for 3D printing, mostly using plastycs.

Portfolio of some previous work attached

Thanks for reading
