
Subject: Browser zoom ignores text in Chrome latest

Since a few days my desktop chrome (latest) browser refuses to properly zoom the Shapeways pages.

Text will not zoom with the rest.

I tracked this down too a common error caused by
-webkit-text-size-adjust: none;

Which is used to fix the layout for iOS devices, but chrome listens to it too.

It seems this can be remedied by adding
@media handheld{

}

Or something

Cheers

Hey Virtox,

Thanks for pointing this out! I added -webkit-text-size-adjust: none; recently as a global to fight some iOS webkit weirdness. Using some @media query magic to target this is the right move. I will get this into an upcoming release.

BTW, if we have not yet been "formally" introduced, my name is Erin and I am one of the Interaction Designers on the team. Feel free to send anything else like this my way via PM or erin AT shapeways DOT com.

Cheers!
