I made a small case for my phone to attach a bluetooth keyboard to, but when I looked at the price, it was 95 dollars. I was wondering if anyone could modify it to lower its cost.

What was the software you used to create the model.  
Depending on that and the size, you could make it hollow. Or cut away parts of it by holes or a pattern.  
Need more info, or PM me the file.

I used Tinkercad to create it.
