PIGEON BANE is a long range, high velocity pea gun that can be used to scare off birds from the comfort of your balcony/window. If you have had problems with pigeon poop on your car or terrace, this might solve your problem! The birds don't get injured by this gun unless it's a close range head shot. It scares them off good though so they are likely never to come back. Be careful never to aim this pea gun at a human though! The ring walls inside the barrel are there to reduce the noise while firing... slightly

Check it out on the site

Awesome! What a great thing. I prefer things that do things, this is one of those things.
