This design is based on a mathematical object called Werner Boy's Surface. I had them printed in stainless to be earrings for my wife. I'm thrilled with the resolution of the printing. This is awesome! The whole process, from uploading my model to getting the finished product, was easy as can be. Thank you! Now I plan to bankrupt myself printing everything I can think of!

Very nicely done! There should be a 3 fold rotational symmetry when viewed from one direction?

I like the cut down "spine" representation, the whole surface would be difficult to show in an understandable way.

I loved the bevels on the edge. Nice effect

Very nice indeed! It had to look at it twice just to understand the structure
