very simple shape (imagine a bunch of pencils bunched together at various lengths, and then the bunch sliced into 7 slices) to be modeled with high facets count for maximum smoothness.

I have a sketchup model which i have already made, but had the facet count at very low. I need the exact same thing done but with higher (much higher) facet count. Slicing in sketchup has proven difficult , especially when dealing with more points.

please write me privately at haigaivazian@gmail.com for more details.

Need this fairly urgently.

thanks!

h.

Hi-

let me know if you still require some help with this model. I work with a team of experienced CAD designers who should be able to do this at affordable rates. Please contact me on

uvegter@yahoo.co.uk

Cheers,

Uco
