I have been modeling for various people for a while now, so I thought I may as well post an ad on here.

Who am I?

My name is Joseph, and I'm an engineering student. I have been making models for people for a few years on the side, and I love doing it.

I use Autodesk Inventor, but I can export it to .STEP and many other types if needed.

I recently was laid off from CBP Fabrications as an engineer due to low demands from clients.

What do I mainly do?

I have been mainly modeling Military hardware for people, and I have done other items as well. My current project I'm doing is a prototype Ipod dock.

If you have an idea, but no sketch, no problem! I'll help you through the whole process. I can help you get the design down, the dimensions/3D model, and help you get it printed/CNC'ed.

If you've got something, I can make it.

Cost?

It really depends on the part(s), but it usually is pretty low. I can get a quote to you within 48 hours after receiving some sort of drawing/sketch with some dimensions.

Contact info:

Please don't hesitate to email me at jfrsys@yahoo.com

Hello,

I have some parts to see if they can be made for multi-rotors I build.

A propeller guard and Dome attachment ring.

My web site is www.xtremedrones.com

Hi Howard,

Do you have any sketches with dimensions?
I am very interested in helping you out.

Please email me at jfrsys@yahoo.com

Thanks,
Joseph

Sorry about that Howard. As of Monday, I have been swamped. After the mass shooting, everyone is in a panic for getting AR-15 parts, so I have been designing some for a few people.

I shall get to all of your emails shortly.

I'm looking to design an e-cigarette mod and most likely develop continuing limited edition mods. The design would look something similar to this:
<http://www.fotos-hochladen.net/uploads/img0174w3z8lkyxh2.jpg>

Let me know if this is something you would be interested in helping with.

Thanks.

Since none of the Shapeways materials (except ceramic) are considered food-safe, it's probably best to not use them with an e-cig.

Right. Your best bet would be CNCing the parts instead..

Hey I just posted in the looking for help thread for what I think to be a simple design. Is this something you could tackle? Here is the link to the info
http://www.shapeways.com/forum/index.php?t=msg&goto=59170&#msg_59170

Yeah, I could do that.

Email me at jfrsys@yahoo.com and we can talk out the details.

Thanks,
Joseph

Hi

I want to create a jeans button and I made together with the button maker the technical sketches. But this time I decided to give shape way a trial. So I need your help in getting the best results by creating the correct files to print

1. as 3d PDF button but using as a surface the surface of the skull attached in the other picture
2. one wire frame option (not sure if that can be printed)

Print material - Stainless Steel or silver

Please send me your offer including lead time, price and some links to your previous works. Any questions please use pwistanbul@gmail.com

Many thanks

Patrick

Hey everyone.

I have gotten a lot more responses than I ever thought I would this past month. I have already done several models for people, and they really like them.

I am currently working on a mass production deal for someone, working out the kinks and such, so I've been only able to do a few here and there right now. I am all caught up I believe on the models emailed to me.

Cheers,
Joseph

Since my emails were being ignored I figured something happened. It's just too bad that I had to turn down other modelers. Thank you and good luck on your current projects.

I am about 15 minutes north of Detroit, MI.

Yes I can.

Joseph -

We talked about making a small part for me and photos with dimensions were emailed back in December. I see you were quite busy with projects. How is your schedule at this point? Can we resume work?

He must have bit-off more than he could chew, because he said the same thing to me.
