maybe this is a stupid question....all i wanna do is to trace a logo & print it on the model. i dun think should do it in a 3D software, but i dunno how to import the vector into SketchUp. i ve simply try copy & paste, but it dosen't work.

anyone could tell me how? thx a lot.

What format are the vectors in?

You can import DXF with this free plugin: Import DXF

the vector is CS5 AI.

i install the plugin & export my logo to .dxf. but it didn't work. after choose the file & the pop-up window, it shows nothing.

is there any setting need?

Sorry, I don't know the settings - I have Sketchup Pro which imports DXF directly.

If that one doesn't work, you can try this one: DXF IN.

I found that if you can find a free sketchup 6 version, importing dxf from illustrator is a breeze (it was built into free sketchup versions back then)....modify it save it as a sketchup file and then you can pull it into sketchup 8.

I was unable to get the import dxf plugin to work for me in free sketchup 8 also so I wasted a bunch of time trying to research why the plugin didnt work..gave up.... and eventually found that round about method with sketchup 6 that works.

If you can find a svg import plugin Gimp can convert a selection to a path, and export as svg.

Since Bones knows about dxf/svg imports, half the battle is won. I really need to post the remesh trick here for fonts/curves it makes things much better topology for deformations by curve modifiers.
