A friend of mine lost a pendant which was very important for her a few months ago and i am looking for a way to replace that as much as possible. So i am looking for someone, anyone to help me create a cat silhouette pendant for her.

I have found an image that looks nice but i don't know if it is possible to create a nice pendant out of this (and it can be a different one, but i think she would like this)

thanks, if i can't find a designer i will definitely use that. i tried it and created two but i want the cat to be visible like on one but i can't think of a way to hold the pieces together

This seems better as pendant but i dont know, it looks cheap to me

On the two shell pendant, you could add a stem that attaches from the head to the ring, and the bottom to the ring.
Another route would be going the relief way. I think if you add a bevel, like the edge of a coin it

would take away from the cheap look.

thanks for your tips I will try doing so.

By the way I am not looking for a designer anymore. Thanks to anyone who took their time to send me messages
