Hi everyone!

I have printed my model in full-color sandstone and I know this material's color will fade with water and I want it to keep it's original epicness.

What products can I use to "seal" or produce a mat-finish on my part without altering the colors?

Also, what type of glue would you recommend?

I was thinking of gluing the part to metal with contact-cement, but I'm not sure what to do to varnish it... any ideas?

Thanks in advance!

Anthony Lemire
