Hi,
I've bought an old racing cycle frame a while ago and completed it with nice parts ...
3D printing seemed to be a good way to add some extra features!

A Carrying Handle, Lightning Valve Caps and a Bottle Fender Mount.

Hi Michael!
I remember you told me you were designing something for your bike!!!... Simply genial! And very useful!

Wel done Michael!

Dario

Great job Michael, 3d printed objects are generally a little lacking in functionality, your stuff is a

good example of real useful everyday stuff made this way.

Very clever designs, and beautiful in simplicity, too! The lightning bolts are great
