Hello~

I wanna make some tableware or something. And what puzzles me is that if the 3D printer will glaze the ceramics or Shapeways will glaze the ceramics after it is made by the 3D printer. And which glaze does Shapeways or the machine use to make the ceramics.

I think this information is very important for me when designing a ceramic product.

Thank you ~~~~

They are glazed after printing, I'll have to ask what kind of glaze.
