Hi forum members!

I discovered this website today and it inspired me to design something new. I have come up with a holder for the wireless charger of the Nokia Lumia 920. This way its easier to interact with and read while its charging. Lots of people got this charger for free with their 920, so i wanted to offer something unique to make the charger more useful.

But i have doubts about if its printable or not and if the holder could withstand a weight of 280 gram/9.88 ozs. What do you think?

I appreciate your help!

Kind regards,

Relief
