
Subject: Some bugs on product description & "allow download" buttons models

Hi, wanna ask a question.

Why when I try to add product description, even though i have space between paragraphs, Shapeways keep merged the paragraphs into one long paragraph? It's just really boring to read a one long paragraph instead several short paragraphs.

Also, everytime I disable the "allow download" in edit products, the "allow download" buttons keeps appeared now matter what I do.

What do?

You can add some HTML tags such as
 to add line breaks in your descriptions.

As to the download option.. log out of the site, then view your shop as a customer would. The download button should be hidden to customers, but should always be visible to you (when logged in).
