Hi,

I designed with Gimp a 2D picture, but when I uploaded by Create -> Easy creators -> 2D to 3D, I can just choose 5 stuff, but i could not choose the size of my letters as I designed it with Gimp. My Gimp project is a 300dpi and my picture size is 2.54cm the same size I add in the 2D to 3D (on your website).

Shapeways team, send me a mail.

Could not be 3D printed "Reason: Thin walls "

How could I make my project possible ?
