Hi,

I am looking for someone who could create 3D models for me modeled after photos of a pair of glasses i've tried on once but didn't fit properly. I could also provide some measurements. The nose bridge would have to be modeled so that it has an Asian fit. What I need in the end is a fully functioning 3D model that I can order through shapeways and have lenses inserted. If you know how I can get hinges integrated please let me know. I am also open for creative design ideas.

Looking forward to your reply.

Best regards,  
Tommy

Hey guys,

I did talk to everyone who replied, thanks for that. I had started working with a modeller from the UK but he suddenly disappeared.

I need someone who has experience with glasses / eyewear frames and knows how to model hinges.

I have all measurements of a pair of glasses that fit me, I even have a full 3D model of my body (as stl file), so I think that would make your work easier.

Looking forward to messages.

Thanks in advance,  
Tommy
