Remember the Half Mob-Tor I discussed in the work in progress section?
Well, it arrived!

I will be travelling next week so, as I could not wait my return, I took some bad pictures (very bad lighting condition, sorry) and made a quick video because I wanted to share my excitement: yes, it works!

Be sure to check the video!

The pictures and the video have been updated in the first post.
Here are some extra pictures:

I am now waiting for the metal version... I can't wait for it...

And this time they arrived super-fast: 4 half Mob-Tor in 4 different materials.

I did not take pictures of the Sandstone one because the central axis snapped when I inserted a marble. This is not a big issue, I will perhaps do a new version for Sandstone (and perhaps for metal too in order to have more flexibility) with the central axis already divided into two.

In the meantime, here are the models in
Polished Strong and Flexible (yes, you already saw this one):

Polished Alumide:

and Antique Bronze:

and a new video that shows all the three models in action with a marble.

For the metal one, I had to force to make the glass marble enter into the pendant (and I think I would need a tool to extract it again). But it rolls perfectly!

In my opinion, it is perhaps a little bit heavy as a pendant though, but it is so fun that it worths every gram .

Wow! The marbles move really well!

Yes, even the first one of the video (with a marble in Strong and Flexible) can turn very fast like the others, even if I did not show it on the video.

But the best results are achieved with glass marbles, because they are very smooth. And with the Half Mob-Tor in Stainless Steel, as it has nearly no flexibility, the result is perfect because you cannot reduce the section of the torus where the marble move with the pressure of your fingers.
