Hello,
I have designed a model in meshmixer and have uploaded it on to Shapeways but it appears upside down. Does anyone know how I can move it so it appears the correct way on Shapeways?
thank you.

Can you rotate it 180 degrees before exporting? Alternatively you may be able to use MeshLab for this.

Bart

Grab yourself a copy of NetFabb Studio Basic (free), it handles the same filetypes as Shapeways with the exception of .dae and coloured models.

Load your model into NetFabb.
The z axis in NetFabb is the 'up' direction on Shapeways website.
Use the rotate function ctrl+d or from the Part menu to rotate the model to the correct orientation.
To save your model, head back to the Part menu and select 'export as'
Upload the new model to Shapeways & job done
