Hi all.

I'm designing a range of glasses and currently have my designs in the form of 2D CAD illustrations (DXF files). I need a talented someone to help turn them into 3D illustrations so that I can get them 3D printed.

I'm hoping it's relatively easy to do as it is just (just, he says) a case of taking the front shape and applying the thickness and curve (from the top view) to it.

I am - of course - happy to pay for your time. And I'll heap praise and adoration on you too. And maybe you'll even get a pair of glasses out of it.

Please drop me a line at [tombroughton@googlemail.com](mailto:tombroughton@googlemail.com) and I can explain more.

Tom
