Hi all,

does anybody know how to smooth a cylindrical surface in Wings.  
It was a coarse collection of straight faces, and I succesfully subdivided these surfaces. but averaging them out proves too much for my skills in Wings. doing it by hand is not an option.

Thanks in advance !

my object : [http://www.shapeways.com/model/48413/step\\_sail\\_1\\_144.html](http://www.shapeways.com/model/48413/step_sail_1_144.html)
