I'm testing out the CoCreate program, which is pretty much my first 3D CAD program other than Google Sketchup. While it does pretty much everything I want it to do, I'm still getting 'non manifold' issues, even with a simple cylinder.

I ran the in-built checks, and not a single error turned up. What am I doing wrong?

EDIT: Oh, and I forgot to mention that I did use the error finding applet on Shapeways, but when it loaded nothing appeared. Just a blank screen (well, except the background).

Sorry, everyone. It seems I accidentally missed the advice on using MiniMagics. Now that I've run the file through MiniMagics, it's perfectly fine to print.

Again, sorry.
