Looking for an experienced modeler to take my drawing, input into a CAD application and provide a printed version to be used as a pototype for a larger project.

A little about the project:

The project consists of pinion shaft and gears combo that will need to interact with bevel gears. The exact details of the project are not worked out so you will need to perform some math for final product.

Overall size of gears is less than 6 inches but consists of serveral gears.

Should be printed in a durable non-metal material.

CAD file and printed output is the final project.

Contact:

cciefrank2000@yahoo.com

Please include a summary of your work and prices.

Contact information, phone number and address

Payment policy and procedures (credit card, paypal etc.)

Regards

Frank
