Hi I love the 3D image preview I think its great how we get to explore the model in 3D but I do think it would make a HUGE difference if there was no automatic rotation after clicking. Its almost impossible to study part of the because of this.

I'm sure im not the only one who would see this as a massive improvement simply by disabling the auto rotate of the 3D image viewer.

Thanks for listening.

Justin.

I'd personally like a play/pause button for the spinning. When I want it to spin, it won't, and when I don't want it to it will.

I agree 100%.

While we're at it, a zoom would be nice!

Zoom wouldn't be as easy as it sounds. The 3D viewer is composed of images so Each zoom layer would require an entire set of images. Or higher resolution. Either way, lots of extra processing and data.
