I uploaded about three times a model saying it should be in mm but after uploading it, it is shown in inches. (length of 10mm (0,10cm) --> length of 0,10in)

I checked CATIA if there is a problem converting the CATPart in wrl but there seems to be no problem...

I'm a little confused, what file type are you uploading? I see you mention WRL. WRL defaults to meters.
