Hey Everyone,

The Car Antenna Snitch has taken flight.

After a few weeks my antenna snitch prototype is still hanging in strong and working perfectly. It has endured hot weather, windy weather, hard rain and has performed through it all.

In the video link below you will see the snitch start to rise up the antenna at about 35 MPH and then shoot to the top at about 50-55 MPH where it hangs on.

Thanks to my daughter for sitting in the back seat of my tiny car to film this.
