Hello everybody!

Here's DualNexus bracelet.

WSF, about 73mm in diameter. Turned out quite nice. Good work Shapeways
Try more flavors at <http://www.alienology.com>

and more details:

and now wife is modeling for me:

Coming up... QuadNexus and more... stay tuned

and how much to print in metal? \$200? Looks great, are you just going to print these in plastic or is

it a one off?

Thanks guys... several more designs coming up soon.

These are now being made as series. Well... I created new, slightly altered design, somewhat smaller and changed the design so that the bracelet is not full circle like O but almost closed like C. Other than that it;s the same thing.

This works well with flexibility of the material to fit both larger and smaller sized hands / arms. This I did after the feedback of some friends saying that this pictured bracelet is little too big. But...

some girls liked it... so now I am going with two models. I should have new version in few days.

I am not sure if I can print this in metal. Probably not exactly as it is now, because the thinnest threads there are about 1mm thick.

I can "beef" it up easy because this is (to a large degree) parametric object.

It DOES give me an option to print stainless steel - but I doubt it will work just like that (maybe someone at Shapeways can tell me?). This would be somewhat over 100\$ in metal... but WSF is material of choice for this one as final. Flexibility just works great with this form. Quite unusual.

But... that is the question I had (and posted to general forum area), what are the constraints of metal printing from any users out there with real-world experience.

Should you have some opinions about it - do share.

See this post here - and give any feedback f you can:
