Hi guys

I have a file in max that I want to bake but I keep getting unknown exception errors in the script. The one time I got the file baked when it was uploaded to SW it came was missing geometry and texture.

It's a phone cover and very small file but I need to get it up soon and I'm pulling my hair out to where I went wrong. I would like the texture baked into the model and exported as a VMRL file.

If anyone can help then I'll send yo the MMax file with textures.

Thanks in advance

Paul
