
Subject: Using Shapeways as production backend (e.g., without any interaction with end customer)

Hi,

Currently, the Shapeways API seems to be aiming at automating uploads of models and putting it into a basket. However, we would like to have API functionality for ordering, paying and shipping as well. Actually, I thought the whole point of a Shapeway API would be allowing external parties to develop applications that use Shapeways as producer but providing a better user experience (that is, without using the Shapeways webinterface altogether).

Is there any chance on supporting the following features soon?

Sign in without end customers having to login (with a shapeways account)

Ordering automatically (using external app's payment account details)

Defining shipment details (same or different for each model)

Best,
Martijn

We want the same thing here, thanks for bringing it up @martiman.

At the moment we're using the shapeways widget but that is only 10% of what we want :
www.fabmejewelry.com

Any more shop owners that are looking for this ?
