For our booth at MakerFaire, we 3D printed our back wall. If you ignore Ben, Savannah, and R2D2 you can see them hanging in the background

For SIGGRAPH, and every show going forward, we would love our booth to have EVERY material represented on the wall, and each panel to be designed by our community.

So that's where you come in.

We are looking specifically for panels designed for Alumide and Elasto but are open to other materials like FUD and Steel too (we have enough WSF though!)

The restrictions are:

Size: 30cm x 30cm x the materials required thickness - (12" high x 12" wide) so about one foot square.

Holes: four holes, one in each corner minimum diameter 10mm - these are so we can connect them together as show in the picture

Complies with all material guidelines

Deadline is uploaded by Tuesday July 2nd.

Each Material will have it's own winner, and there can be multiple winners so multiple prizes of \$25 Shapeways bucks are up for grabs!

Here is my submission! A panel of reptiles that would be great in elasto, the thin wire lizards would expand and allow you to bend the thing all over. I made the wires a bit over 2mm so it should stand the weight.

And here's the link for the model: <http://shpws.me/ok6W>

Am I reading the size requirements right? They seem to specify a 300 x 300 mm square, but Alumide has a max bounding box of 230x180x310mm according to the design specifications. Can the square be smaller than 300 mm, and if so, how small?

Subject: Re: Weekend contest #17: Let us show you off!

[View Forum Message](#) <> [Reply to Message](#)

The size above of one square foot is not quite right. Michael did say "Complies with all Material Guidelines", which would include limiting the model to the max build volume available for the various printers.

For example, FUD needs to be limited (for this contest) to around 120x120mm

For Alumide, I'd stick to 220x220mm or so

Unless of course, if you were design your object at 150x150mm and expect to connect 4 of them together to make up the 300x300mm size.

I made a panel based on a bracelet I designed. The panel exist of two lines and 27x27 little hearts with rings on them to connect to each other.

It is 300x292 mm, with wires of 1 mm. It's designed for elasto, so you could really stretch it.

My laptop didn't liked it all. The stl file is over 500 mb, and I saved it in the lowest setting.

I've designed woven panels at 150 mm for Alumide and at 300 mm for Elasto Plastic. Although the 150 mm panel could be printed in a variety of materials and hung together to form the full size

panel. It was difficult keeping it under 1 million facets.

The first one is designed to be printed in alumide. it's 30x30 cm, but thanks to the hinge it fits into the Alumide printer max printing volume.

The elastoplastic seems to call to me for some reason. Probably because I do masks and things, but I made my wall panel a filigree panel that also can double as a mask when stretched over a face or mannequin form.

<http://www.shapeways.com/model/1186700/quot-elasto-mask-quot-elasto-plastic-panel.html>
<--The model

note I would not recommend eating it like my model here seems to be doing....

We have a few geographical submission

Mt Rainier:

30 x 30: <http://www.shapeways.com/model/1185531/mt-rainier-30cm-x-30cm-panel.html>

15 x 15: <http://www.shapeways.com/model/1185527/mt-rainier-15cm-x-15cm-panel.html>

And LA, since that's where the booth will go next for SIGGRAPH:

30 x 30: <http://www.shapeways.com/model/1185524/greata-la-area-30cm-x-30cm-panel.html>

15 x 15: <http://www.shapeways.com/model/1185522/greata-la-area-15cm-x-15cm-panel.html>

If you like another place more, or want a new one for ever conference/exhibition with the location of the show, let us know. We can generate these pretty quickly.

I have two designs. I call the first one the maze. You could look at it from either side but looking at the convex side first makes you wonder what's on the other side. Why is there a segment that is out of place? You are compelled to look at the other side!

<http://shpws.me/ole3>

My other design is based on a vent vane I designed to fix cracked ones on a house but at \$26 it was still too expensive. (Speaking of which you guys could use a cheaper industrial quality WSF process that can have slight defects or gross colors if you recycle old dirty powders.) This panel has little handles on the three vent vanes so people can look inside. If you want a really neat panel get a standard 12VDC 120mm computer muffin fan and screw it on the back (you need to drill your own holes for your fan), Then hook it up to a switch or a periodic timer that cycles the power on and off from a battery or power supply to make the vanes open up in the breeze from the fan. There is an internal screen in the air flow path to protect little fingers from the fan if stuck in past the vanes. You need to put a screen on the back of the muffin fan if it is exposed. Instead of a fan the back side of the panel could be redesigned to connect to a vent hose but that would be another project. This thing is designed to be industrial trade show quality with 0.1 inch thick walls for the large panel parts. The vane peg holes are oversized about 0.38 mm around the pegs which may or may not allow this panel to be printed in one piece. I've never done that before. It

might be a good idea to print the vanes separately from the main panel and then install them afterwards. Good luck if you print this beast!

I designed two different panels for this.

The first is for Alumide. Designed and sized to be printed 4 times to be one pannel. It has the Shapeways QR Code in the center of a Sun Burst.

Link to the model

The second panel I designed is for Elasto. It was also designed and sized to be printed 4 times to be one pannel.

There a thin .93 mm supported wires for maximum flexibility.

Hi, my name is Andres Roppa from Uruguay and I have been collaborating with Paul Tucker, a "wood artist" from the US, but to better describe what he is involved in check out his facebook page, it's amazing. I have been developing some models for printing that Paul is using on a project of his ... while at this he suggested a Ransom Spiral panel for this occasion.

<https://www.facebook.com/MoorishFretwork?fref=ts>

The panel was designed and uploaded for white polyamide according to a wood model made by Paul, it's hollowed out and shows the intricacies of the Ransom Spiral and how the shape works when woven together... I hope you like it.

Posted by [Wahtah](#) on Tue, 02 Jul 2013 20:02:28 GMT

[View Forum Message](#) <> [Reply to Message](#)

Another woven panel, showing the infinite possibilities of 3D printing. The colors are just to show the 18 individual components making up the panel. The wires are 2mm across.

It's about 30 by 30 cm as in the original instructions. Making a smaller version for alumide would not be a problem, but I would love to see it in flexible.

The model has 951280 faces and is pretty expensive but for once I don't care about that

[View Forum Message](#) <> [Reply to Message](#)

Thanks joabaldwin!

Quickly while it's still tuesday... This one is made of interlocked rings, the cross section of the wire is oval, 2mm high and 4mm wide. If you look closely the outside of the panel and the inside of the holes have a single wire running around them. The fact that the holes are almost shapeways-logo shaped is pure coincidence...

Made for flexible, it consists of 308 separate components, 474400 faces in total.

DANGGG!!! Great work guys!

I would have entered one of my digital fabrics, but I think you guys already got me beat!

I'm glad I'm not the one who has to pick a winner. They are all winners in my opinion!

I think Tahereh_Shahidi has a slight advantage though given that they thought to use a part of the Shapeways logo.

As for something I would put in my house, I kind of like andresroppa's design.

Good luck trying to decide on a winner! HAHAHA!!

Ok guys, these are FANTASTIC and rather than pick one winner, I'm picking (almost) ALL OF THEM! YAY!

Every model that I can get printed is going to SIGGRAPH. Look our for an email in your inbox

later today with your gift code to:

Wahtah - Elasto weave

Master of Science - Elasto

Tahereh - Alumide sparks

Sorhain - Alumide QR code

GHP - Alumide Spiderweb

Draw - Elasto maze

Geobling - WSF/Alumide of LA

Trishycakes - Elasto face

fx2 - Alumide hinges

Vertigopolka - WSF squiggle

Joabaldwin - Elasto tessellation

Almost there...

Daphne - I love this, but I can't make it upload. If you can reduce the size (maybe by reducing the density of the curvy bits, so they are not so tightly packed) and upload it, I'd be happy to print it too.

AndresRopa - if you can upload this model, we could bring it as well. What material do you want to print it in?

Congratulations everyone! I'll be posting LOADS of photos from the booth once they are all printed and hung. I cant WAIT to see it!!

Wow, you guys really did print copies of my panel. I thought maybe you wouldn't, because you said you were going print it in Alumide, and I was afraid it was too big. I can't tell if the lower-right copy is in Alumide, but the middle one is obviously Elasto-Plastic, and it looks like it's taking the strain quite well for the design (which could have used a bit more reinforcement).

I have to admit, I was surprised to be one of the (many) winners once I'd seen all the other entries, but it's very gratifying.

Thank you!
Gillian.

Ooooh, I see one side of my panel! Was it printed in WSF or elasto? It seems rather un-saggy to be elasto.

BTW it's not terribly important but were the gift codes ever sent out?

Subject: Re: Weekend contest #17: Let us show you off!
Posted by [Wahtah](#) on Thu, 25 Jul 2013 19:49:37 GMT
[View Forum Message](#) <> [Reply to Message](#)

@Draw : I wondered the same but I think the elasto is quite firm when it has some thickness and a strong shape like yours has.

In other news, I can confirm that at least one gift code was sent june 10, so there must have been a mixup or a spamfilter involved.

draw wrote on Thu, 25 July 2013 17:30BTW it's not terribly important but were the gift codes ever sent out?

Yes, we did send them out. If you didn't get yours, please get in touch with me at bart@shapeways.com.

Thanks!

Bart
