Your ideas modeled and checked for 3D Printing by Dot San by Dot San, on Flickr

Subject: Re: Have your models created, checked, repaired and shelled

Posted by [SDabbs](#) on Mon, 09 Nov 2009 09:33:34 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hi,

I just wanted to say that DotSan provided me with an excellent service - I tried hollowing the piece out myself (using zbrush) but ended up with a lumpy un-uniformed thickness.

DotSan created the minimal wall thickness (to minimise material costs), remodeled the base (which was a very unpleasant angled block) and re-created the plaque - which is so much cleaner now.

Thanks DotSan!!

Umberto had a model he created in Sketch Up, unfortunately it could not be printed because it had naked edges, non-manifold issues and disjointed parts. We were able to fix his Sketch Up file very quickly.

Jay,

Thanks for all your great work. You did a excellant job turning my drawings into 3-D works. You

made the process easy and pleasant. Look forward to doing more work with you in the future.

Travis

Hey, VirtualV, great stuff!

I'm wondering, how much do you charge - what's a typical hourly rate for your work, and how many hours does an average, fairly simple model take you to repair?

I'm asking because there are some meshes I've made that I'm having difficulty getting clean enough for the uploader to accept them.

If your pricing is reasonable I might hand them off to you.

Hello.

I have worked very hard on a model ariplane 3 in long but it has a manifold error. I was wondering if you might be able to fix the issue because I am farely new at this. I used Google Sketchup to do this and If you could fix it I would be very, very, very gratefull. Thanks!
P.S. It would also be nice if you could make it hollow so it is cheaper.

Just wanted to give a big "Thank you" to Vijay. He does excellent work, quickly and at an affordable price. Best, he was able to put up with me. The top model was a digital kit-bash, and a thoroughly messy one. The bottom two were quick & dirty models. In each case, Vijay was able to make them watertight, manifold, align the normals and then shell the model. Great work, Vijay.

Great! Nice to meet you. Take a look at these two articles on my blog.

Does shapeways have the capacity to print a shoe that is wearable? Take a look at this article on my blog (url below).

What material would you suggest for this? Let me know please and how long (how many hours) it would take you to create a design for a shoe.

<http://www.tallshortgirl.com/2010/03/3d-printed-footwear-is-the-future/>

If I sent you a pair to duplicate, could you create those 3d files for me? Right and Left foot? How long would that take you!?

Let me know! If the price is right, I hope we can work together!

Heya everyone, Vijay was very helpful (and fast) hollowing out a model for me. The cost of the final model printing was reduced from \$200 down to about \$50

Subject: Re: Have your models created, checked, repaired, shelled, reduce polycount and colored
Posted by [formpig](#) on Fri, 03 Dec 2010 12:40:38 GMT
[View Forum Message](#) <> [Reply to Message](#)

I found Vijay to be very helpful on a recent project.

I was also surprised to see the price differential between the "pre-shelled" and "post-shelled" model as test uploads to the Shapeways site.

Shelling is certainly cost efficient and Vijay was a pleasure to work with.

- Jonathan

Vijay is brilliant!

Its not easy trying to get your ideas across to someone half way around the world, but it can be done! Hes very understanding, Im sure he mustve been banging his head on the table a few times, after reading my emails!

Very talented. I will be sending all my work his way (if he isnt sick of me yet).

Even with exchange rates, I wouldnt be able to get the same job done here any cheaper.

Hats of to you Vijay, you are prepared to make dreams come true for people you dont know and will probably never meet.

cheers mate.

Stu.

Hello there.

Some time ago, I tried to accomplish a scene (from Assassins Creed), in which the Hellequinne kills Ezio.

Other than that I just can't get everything 100% right, I got the Problem, that I could never print these Models, because for example the clothes have no thickness at all, they just are..textures in mid air?! (tried it with ragdoll Models in XNALara)

I could give you the 2 ragdolls with a scene, with which I'm not a 100% pleased.

Would be great to hear back from you. ;D

Hi,

I commissioned Vijay to design a 15mm tall miniature for use in a science fiction tabletop game I play. I had some fairly demanding requests, including that the miniature must be modular, coming with different sets of arms (Vijay provided four each of the left and rights arms) so I could glue it together in different configurations with different weapons. Throughout the entire process, Vijay was a professional and approached the commission with enthusiasm and a great attitude, he was extremely patient with my requests for minor tweaks to the model. At the end of the process, not only had Vijay created a 3D model that was visually and proportionally what I had imagined, he had also designed the miniature taking into account the need for strong bonding points when glueing the miniature together. The detail that he has included on such a small model as this is incredible! There was also no problems encountered throughout the process of Shapeways accepting and printing the model....the file was accepted first time and the model arrived in my hands looking exactly like it had in the progress pics Vijay had provided me.

I highly recommend Vijay!!!

Here's a pic of the miniature in one of the several configurations possible after I have assembled and painting it.

Greetings: My friends and I have some shapeways designs that need a bit of "tweaking", plus want to make a stainless steel brand for an upcoming Burning Man event. The brand we need is a simple one. We need a reverse printing of the words "Burnal Equinox" in Ariel Bold font, measuring 1& 1/4' for the outside diameter. The brand part (yes, we weld it on to a steel handle, put it in the fire, and brand leather and wood with it) has to be 1/4" thick, 3/16" of that is background, for a raised relief. We will pay for your time and for Shapeways to make it in stainless steel. (Hey, if you have an idea to make it more interesting, but still legible, we are open. I can send you some pictures of what we have for our other brands)

We have 2 brands in Shapeways design that are not thick enough, so can get you the files to enlarge the outside circles.

In addition, we have some little Burning Men necklaces that need the date below them changed from 2012 to 2013.

Right now, we need to get moving on the Burnal Equinox brand, the event is March 2!

Please let me know if this sounds like the job for you, and what you charge for your services.

We are in California, USA, where are you?

Thanks so much,

Mia Rice-Stone

Hi,

May I call or email you regarding a design project?

I'm seeking a designer who can work on site in Manhattan for the first project, then remote for other projects.

Projects include:

- novel water bottle concept
- cobra belt buckle
- glasses
- skull mask

Please reply to smugsly1@gmail.com

Thanks,

Evan

Dotsan did an amazing job for me producing the CAD drawings for our unusual buses in Nottingham England during the 1970s. He was patient, understanding and very helpful. I told him

what I wanted and he did exactly that. What he did for me was amazing and the result is better than I expected.

Hi,

I am looking for some one who has experience developing consumer products like a kitchen utensil. Currently I am in need for someone to take my concept and develop into a prototype (plastic) need CAD specs if possible.

Let me know if your interested.

Jlm

VERY VERY EASY to work with.

Despite the time difference almost 12 hours - all emails were replied promptly.

I used photo references and dimensions and Vijay did the rest.

Below are some photos I took of the products.

I have found working with Vijay at Dot San a very good experience. He has taken my original idea and created the 3 D modelling so that the product could be 3 D printed. What a thrill it was to open the box to see the tiny baby shoe for the first time.

Wonderfull work, fast realisation and professionnal service. My model was ready in no time. I can only recommand your talent !

Thank you Dotsan for the detailed look of my model, for your patience with my project and keep up the good work. :)

I would have no hesitation in recommending Dotsan for your design project. From examples, real life pictures and fine scale measurements nothing was left un-touched and the end results have been worth it. The design was for a Model train and had to incorporate exact alignment of location pins and lighting holes in a tricky position.. All this was achieved within a tight timescale and spot on accuracy.

Thanks for your assistance in this project - I am sure we will have many more ideas lined up!

Just to tell to everyone who have a dream project in mind, I recommend to all Vijay from Dot San! I was really happy of his work done on my miniature truck model, it was easy to work with him, by always sending work in progress updates for showing the progress during the model conception and answering every question. Highly experienced designer and accurate, he did exactly what I wanted. Great work, great model Vijay! Got the printed model in my hands and I'm very happy!

Yes, all your dreams project will come true with Dot San.

"I wanted to get a 3d printed model of my dad's boat for his birthday. I was able to find an old 3d graphics model online, but it was not suitable for 3d printing. It required several tweaks just to make it printable (wall thickness, etc), but I also had a list of enhancements I wanted to really make it perfect. After exchanging a few photos and a description of what I wanted, Dot San was able to quickly whip together a model that I am sure will impress my dad. "

If you are looking for a 3d modeler then look no further. Vijay is super helpful professional and offers quick service. I contacted Vijay as I wished to print a model of a greenhouse for my degree show. I have no experience of preparing a model for printing and was working towards a deadline. Vijay created a fantastic design and the whole process was very open and quick. I highly recommend Vijay.

I recently had a model prepared for 3D printing by Vijay, he was very helpful, able to do it for a reasonable price and made sure to keep tabs after the project was complete on if it had been successful.

I would strongly recommend his services.

Dot San made my first venture into 3D design and printing a very easy entry. I provided two image of a tyre/wheel and he did the artwork very well and addressed my ideas without question and when required provided sound advice. Great service and great skill. Thouroughly recomend his work and skills to all.

Regards

JMP

i need great 3D modelers for various modeling projects, ranging from cnc fabrication to 3D printing. I've attached some files to be quoted..

Best,

Joe

I highly recommend working with Dot San!

He worked with us to achieve not only the visual design of the 3D model, but also made sure to inform us of the size and price implications through out the entire process. We sent him inspiration pictures and then worked with him back and forth until we were satisfied with the design.

He created the model from scratch making changes and alterations along the way based on our sketches and revisions. Because of his ability to respond to our sketches and redlines, we were able to achieve exactly what we were after!

He was extremely responsive and always made sure to check in with progress reports and informative feedback. He will be our go-to person for future 3D projects.

Thank You, Dot San!!

Vijay was awesome,

I gave him an image I wanted to incorporate into a ring design. He did some wonderful prototypes for me. Then fleshed out the final design. We got them done in plastic to check the fittings and the look.

He was so responsive. Did changes for me the day after I asked, so fast in one case I didn't even notice until he emailed me asking what I thought of the new design!

Super responsive, did wonderful work. I've got him doing some CAD work for another project right

now. Behold finished rings. Wife is super happy with them too :)
