I had a work presentation at the Athens School of Fine Arts recently.
Two of the works, T-Gyroid and Shell, are both produced by Shapeways.
More information here.
Check a video on YouTube and some images on Flickr.

Wow, Using Shapeways for an actual art exhibition !

I saw the shell when it came out of production. I really like it. It is very beautiful and graceful design.

Kindly,
Marleen

Thank you Marleen

This presentation included previews works as well. I am planning to make my next one only with 3D prints. Of course, I will post here again when done, hopefully during 2010...

Thanx again!

hello.

how is the wall thicknes of the shell or th gyroid?

i want to make larger objects (30 cm), but the price . i am privat not commercial. did you tested the minimal wall thickness?

greet

oliver

Hello Oliver

The wall thickness of the shell is about 1mm. Same as the T-Gyroid model.

I know exactly what you say, as I face the same problem each time I upload a model.

I am trying to use 1mm wall thickness, also I try to make my models' surfaces look like a "grid" or any similar grid surface, just to keep the price down.

However, whatever I tried on a 30cm model... gets immediately expensive...

thanks for the fast answer.

ok, then i will make my bigger models with my old convential method .

everything under 20 cm i will print here.

here are my olders models.

Great work Oli

How much did you pay for the red piece to get it printed? Where?

this is self made.

i would pay a lot for print in this size and wall thicknes.
