Most of the models I order are not fragile and are very tough. It used to be that my orders were shipped in small boxes which filled most of the box. This was fine and none of them ever broke.

My last few orders have come in much larger boxes, accompanied by an avalanche of styro peanuts. There is no need for this for my models, but I can see that for others it is necessary.

So perhaps a field could be added to each model about how fragile it is? If the entire order is "not fragile" a smaller box and fewer peanuts could be used?

Just trying to save a few peanuts.
